- Design, Strategize and plan voice journey maps

Communications with a computer, in the recent years, is dramatically changing. The system is always connected to the cloud. You get all services. Book a ticket, hire a cab, get an appointment with the doctor, read story for your children, get recipe for the kitchen or lean a new subject or two. No prerequisites. No bar. Just Talk.

In future, a minimalist office could have just an Alexa type of device and a table. Imagine that. The world of voice based devices, bots is adding value to businesses. Retail, FinTech, Health & Fitness and Social sites are moving to voice enable their services, on popular devices such as Amazon's Alexa application platform.

Conversational .AI Engines, enable businesses to over voice journey for their products and services to customers. We assist with strategy and business models for enabling voice journey maps and applications.

Explore few existing skills that can be quickly set up, to get high level of productivity and efficiency in an Enterprise environment to make this happen like Organizing skills like a Conference Manager, an Email Assistant, add Events to your primary Calendar, or Edit Docs on the fly.

Our CTO and CIO As a Service delivery models, compliments these offerings, providing technology or information diligence and engagement models, for companies wanting to get the best CXO level talents in to their organization, to get advice, augment or get support for project executions, often not needed on a full time basis.
